

COMMAND WALL

Invisibly better facilities.
Visibly better business outcomes.

Connect, command and
collaborate with confidence

Visibly better business outcomes

Seeing the big picture while managing a Industrial facility can be challenging. Multiple data sources, collaborative issues, contextual awareness, safety and security make up a complex ecosystem that's often difficult to manage, until now.

INTRODUCING HONEYWELL COMMAND WALL

Honeywell Command Wall transforms Safety & Security management of an industrial facility from an operational function into a driver of business continuity and efficiency. With integrated workflow, rapid access to information, contextual awareness and ease-of-use, Command Wall helps to reduce risk to business operations within your facility. Powered by Honeywell Experion Industrial Security, Command Wall seamlessly integrates facility-wide resources so you can command and control your facility with enhanced confidence.

INCREASE PRODUCTIVITY, REDUCE COSTS

Command Wall provides access to real-time contextual information through seamless integration with your facility safety, security and enterprise applications. Simple, map-based visualization and touch navigation mean Command Wall is intuitive to operate – promoting reduced training time and increased productivity of your security, safety and facility teams.

Command Wall helps you make more informed decisions by providing high levels of detail with progressive information disclosure. As you zoom into specific systems and areas, more information is made available, meaning you can see the big picture as well as the details.

Helping you to realize the value of facility-wide integration, Command Wall enables you to command and control Honeywell's Fire & Gas, security systems and monitor third-party facility systems with your business applications typically reducing cost of operation.

REDUCE DOWNTIME, IMPROVE BUSINESS CONTINUITY

Operational issues in your facility, such as safety incidents, evacuation, or a security breach, can disrupt day-to-day business activities. Command Wall reduces disconnect between operational silos and unites them under a common collaborative goal. Faster and better response to issues reduces the risk of your facility downtime and help faster restoration to normal operations.

- See the overall context of an issue using advanced alarm management, security video and enterprise facility dashboard to make more informed decisions
- Faster diagnosis of issues through seamless integration of cameras, fire sensors, security systems and more, helps reduce the impact of incidents
- Smart-map elements allow you to navigate sub-systems populated with real-time information – meaning more of the right details at your fingertips.

Increase productivity by removing operational silos

REDUCE RISK FROM INCIDENTS

When critical safety or security events occur, making the right decision under pressure can mean the difference between a minor inconvenience and major downtime. Often ideal for major incident control rooms. Command Wall (name cx) provides the right information to managers and key stakeholders to increase business continuity while allowing first responders to reduce risk to plant and personnel through digital Standard Operating Procedures (SOPs).

The Emergency Response (name cx) helps reduce risk and promotes accuracy when an incident occurs. Standard operating procedures are seamlessly integrated with users, guiding them through required responses step by step in real-time.

Near real-time collaboration between stakeholders is facilitated through transparent actions, comments and user-profiles. Moving beyond the security or emergency control room, integration with mobile devices translates to a faster informed response.

INSTIL CONFIDENCE, ENHANCE IMAGE

Command Wall's size and ease of use allows you to easily demonstrate security, safety and readiness to respond – increasing confidence in business continuity and enhance your corporate image.

Digital recording of Emergency Response captures actions operators make, demonstrating compliance

with your procedures. After an incident has occurred, accurate, fast and automated reporting allows analysis of the event for continuous improvement.

The 'Drills' module enables regular training small scale control room exercises using the full system capability. Major annual drills can be large scale incorporating site wide actions. The Drills module allows operators to drive emergency response through a number of pre-configured events using site SOPs. First responders and operators become familiar with the system and SOPs helping to reduce reaction times and fine tune emergency procedures for better effectiveness.

THIS IS JUST THE BEGINNING

Command Wall is the first solution within the Honeywell Command and Control suite. Command Wall enables you to get more value out of your existing technology, such as Honeywell Experion Industrial Security, Powered by Enterprise Buildings Integrator, and Digital Video Manager and remains an open, flexible system for future growth and expansions.
