

# Honeywell Digital Video Manager Release 620

Smart Surveillance For A Connected World

Honeywell Digital Video Manager is a smart surveillance solution that seamlessly connects your facility to the latest security technology to mitigate risk and provide a resilient foundation to enhance safety, security & promote operational efficiency. Whether you're responding to a major threat, investigating a minor incident or monitoring safety and security, Digital Video Manager's smart features, powerful functionality and intuitive user interface simplifies securing your facility, and your business.

## FORENSICS, EFFECTIVE INVESTIGATIONS AND MITIGATION

Honeywell DVM delivers flexibility and power to the operator to combat critical events and simplify everyday workflows with smart features, powerful functionality and ease-of-use. The flexible workspace, instant and synchronized playback, motion searching, slow motion playback, bookmarking, integrated analytics and synchronized video export are just a few of the powerful features for faster and more effective security & safety event management.

## GREATER CONNECTIVITY

Support for open integration of security products via ONVIF Profile S and Profile G and Video.Net integration allows you to embrace innovation, adapt to changing security threats and interoperate with existing infrastructure.

## CURRENT AND SUPPORTED

Subscribe to Honeywell Solution Enhancement Support Program (SESP) to stay current with the latest version of Honeywell Digital Video Manager allowing faster access to powerful new functionality with cost certainty.

## ROBUST, RELIABLE AND RESILIENT

Available, encrypted security operating environment with true redundancy at server, at recording media and automated backfill. Intelligent self-monitoring metrics including memory, power supply, disc failure and more, enabling greater insight into system status.

## RAPID ADOPTION, MINIMIZE DISRUPTION

Accelerated product discovery promotes configuration time savings and minimizes disruption to facility operations.

## EFFICIENT AND SCALABLE CONFIGURABILITY

Multi-layered, high density and high volume surveillance capability promotes ease of scalability and expandability for a smart long-term investment. DVM's distributed video architecture seamlessly integrates the video operations of numerous systems onto one virtual platform.

## MULTI-SENSORY OPERATING ENVIRONMENT

Featuring voice command, mobility, touch screen interface, video walls and more, DVM delivers more options, and greater flexibility, saving critical detection, analysis and reaction time.

## SIMPLIFY ROUTINE TASKS

Intelligent automation with Integration with Experion Process Control and Experion Industrial Security platforms simplifies routine tasks removing the need for complex scripting. Facility-wide rules, such as activating a camera recording when an incident occurs or exporting a video incident, can be configured in minutes.

## CONFIDENCE IN APPLICATION

DVM is the smart surveillance solution of choice for thousands of facilities world-wide. From Onshore facilities to offshore facilities, large single site to multi site facilities, DVM offers flexibility, intelligent control and extensibility.
