

Manage, contain
and reduce risk

Incident Workflow

Improve outcomes with integrated
and collaborative workflows.

Safe facilities Secure business

When critical safety or security incidents occur, making the right decisions in a predictable and traceable way can mean the difference between a minor delay and a serious disruption of business.

INTRODUCING HONEYWELL INCIDENT WORKFLOW

Incident Workflow helps guide users through the decision-making and response process during critical safety & security situations. By seamlessly integrating emergency operations with Safety and security systems, Incident Workflow will help reduce risk, promote continuity and increase productivity throughout your business. Incident Workflow is part of the Honeywell Command and Control Suite, built upon the Honeywell Experion Industrial Security powered by Enterprise Buildings Integrator platform and over 100 years of systems experience.

COLLABORATE TO REDUCE COSTS

You can often develop a more rapid incident response by thinking outside the security or emergency response control room – Incident Workflow allows first responders, operations and facility staff to cooperatively respond to incidents from multiple devices.

Seamless integration with Honeywell's Experion Industrial Security allows intelligent automation across your facility. For example, authorized users can perform a number of actions from a single:

- Mass notification to key people or personnel affected
- Automated or manual control of surveillance cameras
- Unlocking and locking of doors or gates to allow first responders to access critical areas

Improve outcomes with integrated and collaborative workflows.

MANAGE INCIDENTS. REDUCE RISK.

By combining business-critical Standard Operating Procedures (SOP) with automated and manual detection of incidents, you can promote reduced disruption to your business. With immediate access to SOPs, operators are guided through potential responses in near real-time, reducing potential impact and the risk of incident escalation. You can easily link SOPs to multiple locations within your facility, providing users with relevant information regarding specific issues. And because all these functionalities are promptly available through an intuitive interface, it promotes reduced response times and improved effectiveness.

BUILDING CONFIDENCE IN COMPLIANCE

As events occur you can access visualization of progress, priority, comments and owners. This automated system can also be used to demonstrate enhanced security, safety and readiness to respond – increasing stakeholder trust in business continuity.

To further compliance and traceability, you can readily create reports that demonstrate adherence to established protocols. Following an incident, you can recall user actions, including a time-stamp and their name. This analysis of individual events allows you to plan and better prevent future incidents, helping to reduce long-term costs and optimizing resource management.

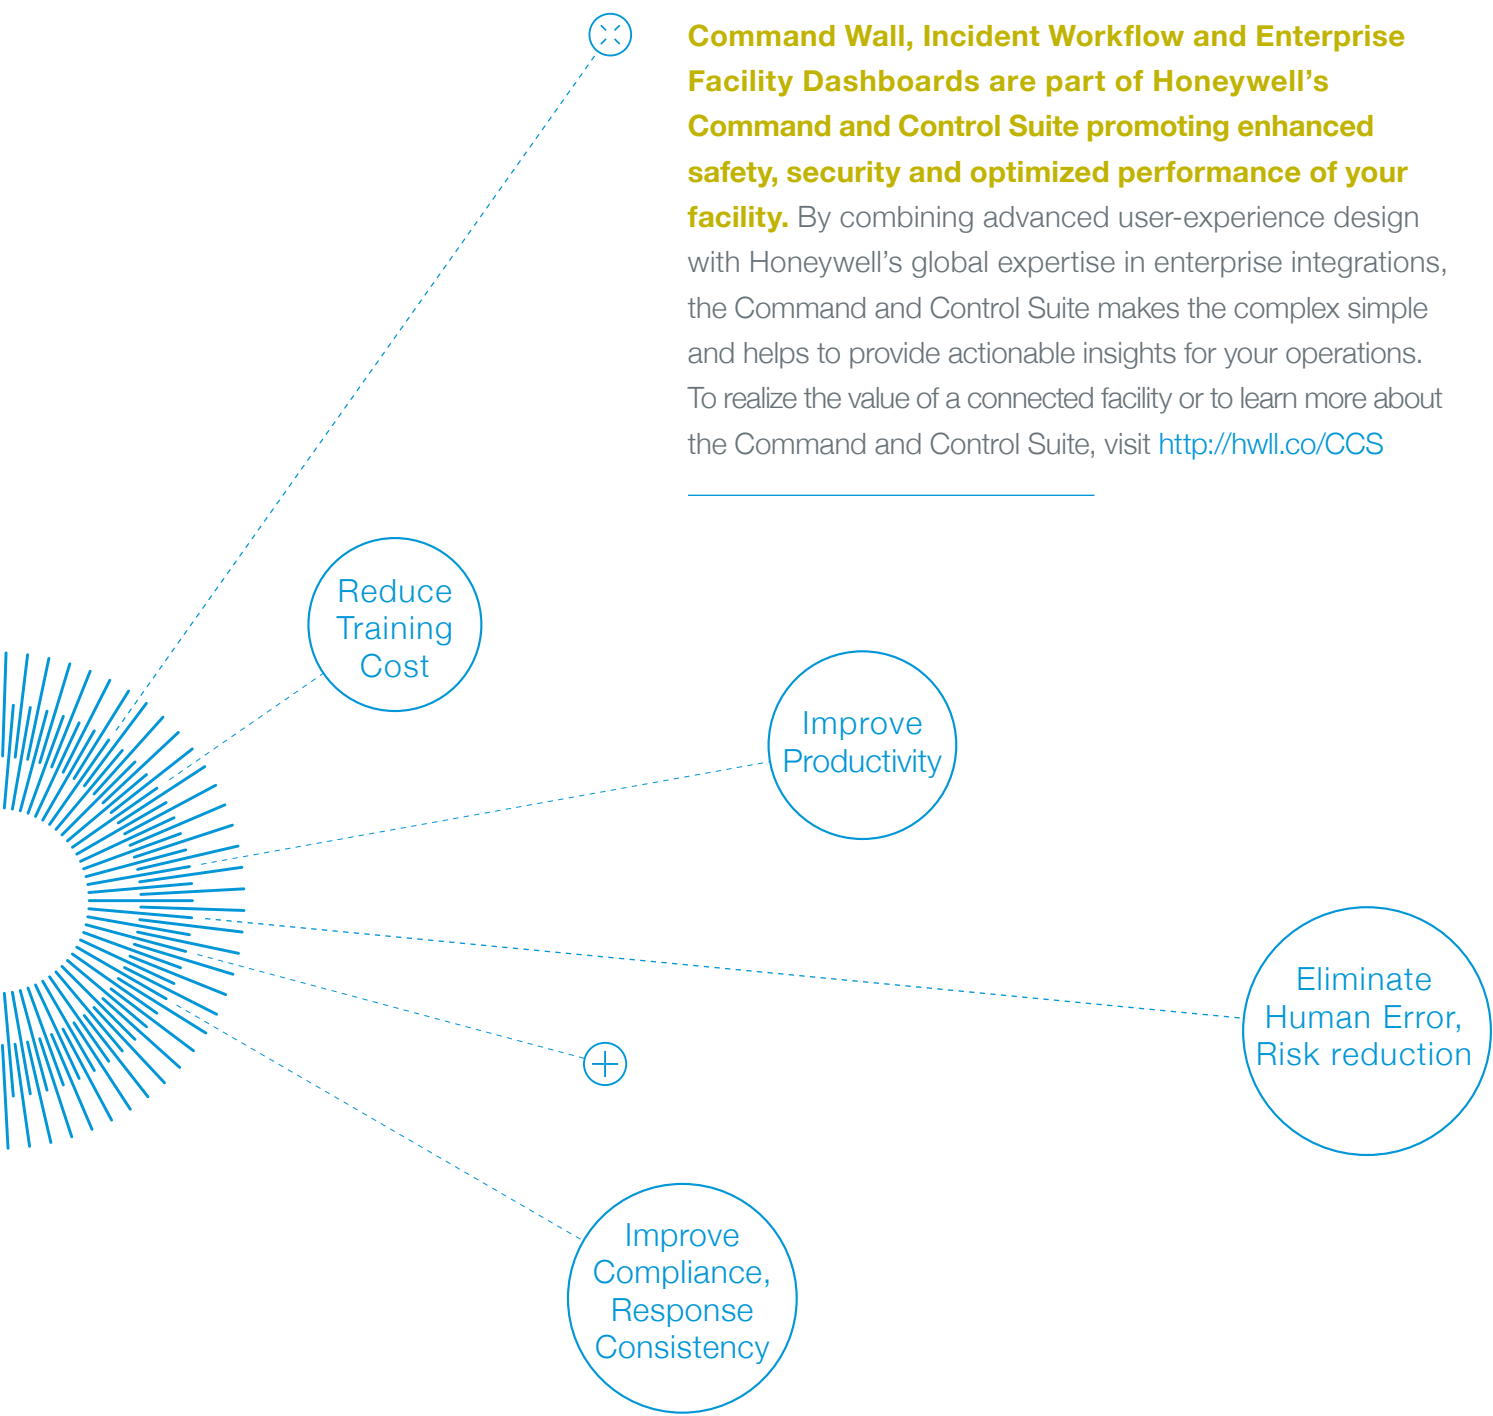

SIMPLE YET POWERFUL

Incident Workflow is powered by the unseen intelligence of Honeywell Experion Industrial Security platform powered by Enterprise building integrator and employs advanced user- experience design across multiple devices – Honeywell Command Wall, desktop or tablet. Incident Workflow's clear and easy-to-understand workflow typically reduces training requirements and administration, and helps provide increased confidence in the user.

AUTOMATED PRODUCTIVITY

There's no need for information to be manually written with Incident Workflow – all reports can be automatically retrieved and accurately reproduced, often increasing productivity and reducing costs. You can also manage scheduled events with simplicity, such as regular safety and security equipment maintenance or security checks, helping to reduce the chance of manual error.
