

Webinar On-Demand

Managed Industrial Cyber Security Services

Industrial Cyber Security is a challenge for many reasons:

- Industrial systems are difficult to patch
- Legacy devices inhibit the implementation of modern cyber security controls
- The shift from proprietary systems to open computing platforms has increased the exposure and vulnerability to cyber threats.

Perhaps **the biggest challenge, however, is building the right staff to address these issues.** Industrial cyber security professionals are a rare breed and the demand for their unique skill set continues to increase rapidly.

Join **Eric Knapp** in this webinar as he *explores the pros and cons of using managed cyber security services* to augment staff, and to make existing staff more productive and efficient through all stages of the cyber security lifecycle.
