Out-of-Box Operator Guidance and Alarm Help for Honeywell UOP Process Units

ON-DEMAND WEBINAR

Recording Available:
- Webinar Date: April 11, 2017
- Duration: 50 minutes
- Size: 90 MB

Watch it Now

Taking the wrong course of action on a seemingly innocuous alarm can cause catastrophic equipment damage, bringing a process to its knees within minutes. How operators deal with these incidents can be the difference between returning to normal control quickly, or a million dollar price tag on an unplanned shutdown.

Honeywell’s DynAMo Solutions Suite for UOP is designed to reduce the risk of operator error by providing real-time alarm help, out-of-the-box, for UOP related process alarms. Guiding operators to the correct course of action, in any situation, all of the time.

Join our on-demand webinar and discover more about operator guidance and alarm help for reduced risk and safer plant operations.
