Triconex UCN to EUCN Migration Solution (TCMI)
Discover the sustainability with new technology

On Demand WEBINAR

Recording Available:
- Webinar Date: June 07, 2017
- Duration: 35 minutes
- Size: 70MB

In 2016 Honeywell introduced the non-disruptive approach for incremental migration of their coax based Universal Control Network (UCN) devices to the unified FTE control environment for Total Plant Network (TPN) and Experion PKS control systems.

The migration solution included all Honeywell connected devices to the UCN. Additionally, Honeywell will make available the Triconex Communication Module Interface (TCMI) that enables Triconex-SMM connected systems to be migrated to the FTE based UCN (or EUCN).

That webinar will explain the simplicity of the incremental UCN devices upgrades applying the Enhanced Network Bridge (ENB) and Triconex connected systems migration using TCMI.
