**Duration:  
46 minutes**

As the analytics platform for IIoT by Honeywell, the Uniformance® Suite provides powerful data analytics capabilities to enable users to capture the data they need, visualize trends, collaborate with others, predict and prevent equipment failures, and act to make informed business decisions.

With Uniformance® Asset Sentinel you can monitor equipment health, energy utilization and process performance. It is a powerful solution which provides real-time advanced asset-centric analytics that helps reduce unplanned capacity loss and maintenance costs with predictive notifications.

Watch this 60-minute webinar to learn how Uniformance Asset Sentinel's "digital twin" technology can automate the surveillance of hundreds or even thousands of assets from a single site or across an enterprise to anticipate potential problems and minimize unplanned capacity loss and protect your bottom line.
