

Webinar On-Demand

The Expanded Uniformance® Suite: Data, Analytics and Visualization Working Together and Smarter

The Uniformance® Suite is expanding with new ways to organize process data within the context of an asset model complemented by intuitive visualization and powerful analytics capabilities.

Imagine a fully integrated suite where all types of data are efficiently captured and stored for easy retrieval. In this suite, information is easily visualized and explored for effective engineering analysis. Events are predicted and detected based on underlying patterns and correlations, and process intelligence is used for better business decision making – all performed within the context of an asset model.

Watch this webinar to learn how to transform data into timely and effective decisions for Smart Operations. You'll hear from Bart Winters, Global Business Director for Asset Management Solutions, Honeywell Process Solutions, and Jan Pingel, Process History and Analytics Product Director, Honeywell Process Solutions, as they discuss the expanded Uniformance Suite and how data, analytics and visualization are working together and smarter.
