Warranty/Remedy

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Contact your local sales office for warranty information. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace without charge those items it finds defective. The foregoing is Buyer's sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for its use.

While we provide application assistance personally, through our literature and the Honeywell web site, it is up to the customer to determine the suitability of the product in the application.

About This Document

Abstract
This manual contains all the information that is needed to install, configure, calibrate, operate, and troubleshoot the DirectLine® Sensor. Insert 70-82-10-02, a quick reference guide for configuring and calibrating the DL422, should accompany this document.

1. Introduction

1.1 Overview

The DirectLine® Sensor consists of an electronics module connected to a Meredian II ORP electrode that eliminates the need for pre-amps, transmitters, and analyzers in ORP applications.

The modular electronics design can be separated from the electrode, allowing the electrode to be easily removed or replaced while retaining power to the electronics module.

The DL422 **electronics module** is contained in a Nema Type 4x polysulfone housing. The Module can be mounted as an integral unit directly connected to the electrode or remotely using an electrode with a cable. The sealed polysulfone housing has plug-in connections for the Meridian II ORP probe and 4-20 mA output connection.

![DirectLine® Sensor](image)

*Figure 1-1  DirectLine® Sensor*
1.2 Electronics Module

The electronics module is loop-powered by 16-42 Vdc and will modulate its supply current from 4 mA to 20 mA, depending upon the ORP value that is measured by the Meridian II electrode.

A 4-20 mA output connection is provided via a 6m cordset or a customer supplied cable used in combination with a field wiring connector.

![Electronics Module](image1.png)

Figure 1-2  Electronics Module

1.3 Operator Interface

The DirectLine® Sensor operator interface consists of three pushbuttons and one 4-digit, 7-segment LCD display with 3 decimal points, plus (+), and minus (−) signs. It is responsible for the display of measured values and configuration of parameter values.

Notes:
1. Customer supplies cordset or cable with M12 connector. Suppliers & P/Ns include:
   - Phoenix Contact
     - Cord-set SAC-3P-5.0-PURM12FSSH Stainless
     - M12 Field Wiring Connector SACC-M12FS-4CONPDU
     - Cable B8141-0
   - Turck
     - RKV4T-6/S618
2. Recommended cable is 2-wire twisted shielded pair

RESTRICTIONS

ORDERING INSTRUCTIONS:
1. Part numbers are provided to facilitate Distributor Stock.
2. Orders may be placed either by model selection or by part number.
3. Part numbers are shown within the model selection table to assist with compatibility information.
4. Orders placed by model selection are systematically protected against incompatibility.
5. Compatibility assessment is the responsibility of the purchaser for orders placed by part number.
6. Items labeled as N/A are not available via the stocking program and must be ordered by model selection.
2. Installation

2.1 Assembly and Wiring

Depending on the customer selected output cable options, the DirectLine can be wired to an appropriate 16-42 Vdc source using 2 different methods:

1) Cordset. See Figure 2-1.
2) Field wiring connector with customer supplied cable. See page 6.

2.1.1 Cordset

![Diagram of Cordset Connection and Wiring]

**Figure 2-1 Cordset Connection and Wiring**
2.1.2 Field Wiring Connector with customer supplied cable

Refer to Figure 2-2. The field wiring connector supports customer supplied cable with an outer diameter of 4-6mm, 2-wire twisted shielded pair.

Table 2-1 Assembly and Wiring Procedure for Field Wiring Connector

<table>
<thead>
<tr>
<th>Step</th>
<th>Procedure</th>
</tr>
</thead>
</table>
| **1** | Disassemble field wiring connector  
a) Unscrew parts to separate pressure screw, clamp type cage, gasket, housing and female insert. |
| **2** | Insert customer supplied cable through connector parts  
a) Slide pressure screw over skin and tinned customer cable (note orientation).  
b) Slide clamp type cage over cable (note orientation).  
c) Slide gasket over cable.  
d) Slide housing over cable (note orientation). |
| **3** | Connect wires to pins  
Look closely at end of female insert to locate pin numbers. Connect positive wire to pin 1 and negative wire to pin 4. Remaining wires and female insert pins 2 and 3 are unused. |
| **4** | Assemble field wiring connector  
a) Screw female insert to housing until female insert’s o-ring is compressed.  
b) Slide clamp type cage/gasket into housing.  
c) Thread pressure screw into housing until ¼ turn past finger tight. |
| **5** | Connect cable to power supply  
Wire the other end of the Output cable to a 16-42 Vdc source as indicated in Figure 2-1. Note: your wire colors may be different. |

</table>

Table 2-2  Integral Mounting Procedure for ORP Electrodes

Figure 2-3  Integral Mounting
2.3 Remote Mounting

When the DL422 is specified with Table II = 3, the Remote Connector Assembly (part number 51500768-002) is supplied loose for connection of the Meredian II ORP electrode cable to the DL422 module. Table 2-3 gives the mounting procedure.

Table 2-3 Remote Mounting Procedure for ORP Electrodes

<table>
<thead>
<tr>
<th>Step</th>
<th>Procedure (Refer to Figure 2-4 and Figure 2-5)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Turning counterclockwise, remove strain relief/cover combination from the remote connector assembly.</td>
</tr>
<tr>
<td>2</td>
<td>Loosen and remove compression cap from strain relief fitting. Carefully push cable end through cap and strain relief fitting so that these parts are strung back along cable jacket.</td>
</tr>
</tbody>
</table>
| 3    | Connect cable leads as follows:  
  Terminal 1 = Black Reference Lead  
  Terminal 2 = 100K ohm resistor (pre-installed by Honeywell)  
  Terminal 3 = 100K ohm resistor (pre-installed by Honeywell)  
  Terminal 4 = Shield  
  Terminal 5 = 1 Megohm resistor (pre-installed by Honeywell)  
  Terminal 6 = Red Measuring Lead and  
               1 Megohm resistor (pre-installed by Honeywell) |
| 4    | Slide cover along cable and tighten by hand onto the remote connector assembly. |
| 5    | Slide cap along cable and tighten onto cable jacket with small wrench until cable cannot slide within strain relief rubber bushing. |
| 6    | Remove red protective vinyl boot from opposite end of connector assembly. |
| 7    | Apply a thin film of silicon grease on the ID of the electronics module’s electrode mounting cavity. |
| 8    | Plug remote connector assembly into DL422 module aligning polarity tab of module housing and mating groove on connector. |
Figure 2-4 Remote Mounting
2.4 Conduit connections

The DirectLine provides a male \( \frac{3}{8} \)" NPT thread to accommodate a customer conduit connection. Use \( \frac{3}{8} \)" conduit coupling (min. 38.1mm (1.5") long) on DL conduit connection to clear cordset connector. Conduit can not be used with field wiring connector due to size restriction.

Do not exceed 200in-lb. torque when attaching fixed piping.

Use wrench flats provided under the \( \frac{3}{8} \)" NPT threads to support the DirectLine during installation.
3. Configuration

3.1 Overview

Configuration Parameters

Set Up consists of configuring the following functions:

- **Noise Suppression Frequency Selection** – Selection of 50 Hz or 60 Hz. Defaults to 60 Hz at unit reset.

- **Output Configuration** – The following Output Configuration functions can be selected:
  
  - **0 % Range**
    - 0 % Range values can be adjusted within a range of –1600 mV to +1600 mV in 10 mV increments.
  
  - **100 % Range**
    - 100 % Range values can be adjusted within a range of –1600 mV to +1600 mV in 10 mV increments.
  
  - **0 % Calibration**
    - Output current can be typically adjusted to within a range of 3.80 mA to 4.40 mA.
  
  - **100 % Calibration**
    - Output current can be typically adjusted to within a range of 19.60 mA to 20.40 mA.

Table 3-1 provides steps and entry information for the complete configuration sequence.
3.2 Configuration Set Up Procedure

ATTENTION:
In Table 3-1, under the **Press** column:

- **Hold** means to hold the button down until the display changes.
- **Momentarily** means to press and release the indicated button.

From the Online ORP display, follow this procedure.

ATTENTION:
If no key is pressed for 60 seconds, the display will abort the entry mode and default to Online Display.

4. Calibration

4.1 Calibration Diagnostics

Introduction
The manual standardization adjustment changes the zero offset diagnostics used by this system. This value is viewed as read-only information. It is good practice to observe this value after calibration. Monitoring the value over time will help you predict when the electrode will need to be replaced.

Zero Offset Value
When Online ORP value is displayed, PRESS button momentarily to display the current Zero Offset value.

Zero Offset is non-volatile and is initialized to 0 mV at unit reset.
It has a range of ± 120 mV and it is updated after each calibration.

60 Second Timeout
If no key is pressed for 60 seconds, the display will abort the entry mode and default to Online Display.

4.2 Calibration Diagnostic Reset

Introduction
When a new electrode is installed, the indicated ORP will use the zero offset value from the previous calibration. Depending on the condition of the replaced electrode, the difference between the known and indicated ORP of the new electrode may vary as much as several millivolts. A calibration on the new electrode will correct this difference.

Zero Offset ORP Value
a) Momentarily press to view the Zero Offset value. From this display press and hold the button until the Zero Offset ORP value resets to factory default “0”.
b) Press MODE button, or wait 60 seconds, to return to Online ORP.

4.3 Calibration

Overview
Calibration consists of the following function:

• **Calibrating the Zero (Standardization)** – Manual ORP calibration. In manual calibration, you can select a new ORP value above or below the recognized live ORP value.
ORP Calibration Using Reference Solution

**Recommended to adjust for changes in electrode potential over time**

An ORP measuring system can be checked by measuring a solution having a known oxidation-reduction potential, then adjusting the sensor to match. Although a reference solution provides only an approximation of ORP potential, the system can be adjusted periodically to compensate for changes in electrode potential over time.

**Materials**

The materials required to use the ORP standardization method are:

- A solution with a known oxidation-reduction potential. (See “Instructions for preparing solution” below.)
- A container for the solution, large enough to immerse the electrode to measuring depth.
- Distilled or de-ionized water to rinse the electrode.

**Instructions for preparing solution**

To prepare an ORP standardization solution, dissolve 0.1 g of quinhydrone powder (available as Honeywell part number 31103015 for a 2 oz. bottle) in 5 cc of acetone or methyl alcohol (methanol). Add this to not more than 500 cc of a standard pH reference solution (buffer), about 1 part saturated quinhydrone to 100 parts buffer solution. The oxidation potential of this solution is listed below for several temperatures. The polarity sign shown is that of the measuring element with respect to the reference element.

These solutions are unstable and should be used within eight hours of preparation. All mV values in Table 4-1 have a ±30 mV tolerance.

**Table 4-1 Oxidation-Reduction Potential of Reference Solutions at Specified Temperature**

5. Operation

5.1 Displays

Overview

The DirectLine® DL422 displays the ORP value and Zero Offset ORP value. The table below describes these parameters.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Online ORP</td>
<td>Measured ORP expressed with fixed whole number precision. Range: –1600 mV to +1600 mV</td>
</tr>
<tr>
<td>Zero Offset ORP Value</td>
<td>Zero Offset ORP value expressed with whole number precision. Range: –120 mV to +120 mV</td>
</tr>
</tbody>
</table>

The default display and home position is the **Online ORP** display. It appears when:
- *The unit is powered up*
- *No button presses for 60 seconds*
- *The Mode button has been pressed during Zero (Standardization) calibration (Sample Calibration)*
- *The Mode button has been pressed during a configuration edit*

The measurement and display of ORP is updated at a rate of 500 ms.

**ATTENTION:**

In Table 5-2, under the **Press** column:
- **Momentarily** means to press and release the indicated button.

5.3 Unit Reset

Overview
Unit Reset initializes all of the DirectLine® Sensor’s calibration and configuration data to factory default values.

Procedure
- From the Online ORP display, press and hold the ▲ and ▼ buttons simultaneously until the “rSEt” appears on the display (minimum of 10 seconds).
- “rSEt” will remain on the display until reset is complete. Next, the firmware version number appears briefly and the unit then returns to the Online ORP display.

| Table 5-4  Factory Default Values |
|-----------------|--------------------------|
| Data            | Default Values           |
| Zero Offset     | 0 mV                     |
| Noise Suppression Frequency Selection | 60 Hz                   |
| Output Configuration – 0 % Range Value | –1600 mV                |
| Output Configuration – 100 % Range Value | 1600 mV                 |
| Output Configuration – 0 % Calibration | 4.00 mA typically       |
| Output Configuration – 100 % Calibration | 20.00 mA typically      |

**Cordset**

The cordset connection is an M12 female type that can be purchased directly from Honeywell or from multiple vendors including:

**Turck Industries**

- Part Number RKV4T-6/S618 for a 6 m cordset with a stainless coupling nut
- Part Number RK4T-6/S618 for a 6 m cordset with a nickel plated coupling nut

**Phoenix Contact**

- Part Number SAC-3P-5.0-PUR/M12FSSH Stainless for a 5m cordset with a stainless coupling nut
- Part Number SAC-3P-5.0-PUR/M12FSSH for a 5m cordset with a nickel plated coupling nut

**Field Wiring Connector**

The Field Wiring Connector is an all-plastic screw terminal M12 female type that can be purchased directly from Honeywell or from multiple vendors including:

**Turck Industries**

- Part Number B8141-0 for a M12 field wiring connector that accommodates customer supplied cable.

**Phoenix Contact**

- Part Number SACC-M12FS-4CON-PG7 for a M12 field wiring connector that accommodates customer supplied cable.
