

Supporting Your Legacy Server and Station Platform Needs

Honeywell's Certified Recycled Parts (CRP) program offers more than field replaceable spares. Honeywell certified servers and stations are available as well to meet your specific needs for older platforms.

Service Note

The Honeywell CRP program is aimed at optimizing user's investments in Honeywell systems. It helps extend the life of existing systems with tested and certified recycled parts enabling a transition to current supported systems over a defined time. Those certified parts extend to finished goods such as servers and stations.

Addressing PC Technology Churn

The computer platform technology has a much faster churn than the typical control system hardware which may have been consistent for an entire decade or more. Computer manufacturers are coming out with new platforms every couple of years which greatly reduces the lifecycle of any specific server or station build for complete new units. For those sites looking to support their Honeywell nodes on the same hardware platforms across a system you may either purchase additional complete server and station platforms up front when implementing the platforms to have spares on site or you can hope a complete unit is available when you have a need.

Legacy Server and Station Platforms Available

The latter is where Honeywell CRP can be of great value as it has several generations of recycled server and station platforms available for you to choose from. These include rack ready and tower versions as well as multiple RAID offerings. If Honeywell sold the platform as a standard server or station option when the computers were available new the Honeywell CRP team will have recycled units available going forward. Whenever a computer platform is no longer available new turn to Honeywell CRP to see if they can fill your server and station hardware needs.

Honeywell CRP Certification

As with all products supplied by Honeywell CRP the servers and stations must pass the Honeywell certification process to validate functionality and be sold with the '-RP' label that signifies a Honeywell Certified Recycled Part.

Warranty and Agency Approval

All Honeywell CRP material is covered by a pro-rated warranty for one year which is consistent with Honeywell new build factory spares. A two-year window of orders shows failure rates of less than 0.75% of the certified material shipped to sites.

In addition, any parts purchased from Honeywell CRP will not invalidate any agency approvals on the original system installed and will be fully supported by Honeywell.

Payment Options

All normally used payment options for your Honeywell spares are available to purchase CRP material. This includes Purchase Order, Credit Card, and a Parts Replacement contract entitlement.

How to Order

The servers and stations are available to order through your normal Honeywell spare parts channels. This includes ability to order through Honeywell's online store at www.honeywellprocess.com where the store is available.
